Hi - this is for the record -

The cores listed below were sampled for forams by Caitlin Keating-Bitonti at PhD candidate at Stanford University. She has requested and received permission to sample the top few mm of a suite of box core sub-cores from A103SC.

Ms Keating-Bitonti sampled the top few mm of a portion of each core.

A103SC 4106-B1 (sampled a portion of the top 3mm from the working half)
A103SC 4153-B3 (sampled a portion of the top 3mm from the working half)
A103SC 4380-B1 (sampled a portion of the top 3mm from the working half)
A103SC 647-B1 (sampled a portion of the top 3mm from the working half)
A103SC 644-B2 (**resampled** a portion of the top 3mm from the working half)
