

Explanation

- Location of seismic profile shown on Plate 3b
- ····· Faults, solid where well located, dashed where inferred or approximately located, dotted where buried by more than 20 milliseconds of undeformed strata
- Approximate positions of Hosgri fault traces from PG&E (2011b)
- Syncline
- Anticline
- Amplitude: High to Low

Note: Depth values on seismic profile assume a velocity of 1600 m/sec.

Vertical and horizontal geometry of Hosgri Fault Zone strands in (a) 3D seismic-reflection profile 11180 and (b) on MBES bathymetry map within northern part of survey area
